Corona tests in the Technology Park successfully launched

Since Tuesday, April 27th, 2021, we have been offering our tenants corona tests in our TPK Casino. As our cooperation partner, the Minerva Pharmacy in Rintheim, supports us in carrying out the rapid antigen tests.

aicas turns 20

"The best is yet to come!"

The anniversary year will be kicked off on May 3rd, starting at 3 pm. To start off well, an Automotive Software Roundtable - Unlocking the Future of Driving with Data - will be broadcast live from TPK into the world.

On Thursday, May 6th, starting at 3 p.m., a second roundtable focused on Agile IoT – From Edge to Cloud - will also be broadcast live worldwide out of TPK. Leaders from renowned companies will be present.

Digital visit of the European School Karlsruhe at the Technology Park

Since excursions are unfortunately not possible these days, there was a virtual meeting this year between the students of the geography achievement course of the graduating class of the ESK, their teacher Ms. Oehm, Mr. Stieboldt and Ms. Knörr. The subject of the exchange was the hard and soft location factors of a science park.

Corona tests in the Technology Park successfully launched

"As a partner to our companies located in the Technology Park, we are happy to support them wherever we can," says Thomas Lüdtkke, sole managing director of TPK GmbH.

Because of this reason and as part of our services, we decided to offer our tenants corona tests in the park weekly until further notice.

We are very pleased that we were able to win over our cooperation partner, the Minerva Pharmacy in Rintheim, to carry out the rapid antigen tests in our TPK Casino.

The first day of the tests, on Tuesday, April 27th, 2021, started successfully. We are pleased that there has already been an increase in demand for the next appointment and positive feedback from tenants and the Minerva Pharmacy.

Jamaica is more than an island - 20 years of software made in Karlsruhe

On May 3rd, 2001, three young software engineers and a business administration graduate founded the software company aicas in Karlsruhe. Thanks to the good reputation for computer science of the city of Karlsruhe and the FZI, supporters and partners for the project of the innovative founders were soon found: The Cyberforum, EU projects, the FZI and the city of Karlsruhe were among the supporters of the first hour.

Jamaica's core product, JamaicaVM, was launched on the market and won various awards over the years. With SIEMENS as one of the initial customers, the company made the leap into the automotive industry; other new customers from the aerospace electronics sector joined in.

Originally emerging from the technological and academic environment in Karlsruhe, aicas has evolved into a global high-tech company with offices in Europe and North America, serving customers around the world.

"Over the years, we have expanded our vision to revolutionize the programming and management of embedded systems" is how Dr. James J. Hunt, CEO of aicas GmbH sums up the 20-year success of the Karlsruhe-based company. aicas produces some of what customers have relied on for 20 years and now runs in more than 21 million embedded devices.

And so the official motto for aicas' 20th anniversary is "The Best Is Yet To Come." Automotive, Artificial Intelligence and Security are at the Top of the social and corporate agenda.

"Our goal is to become the leading provider of embedded software solutions, accelerating the implementation of new business models and processes across cloud and edge infrastructures in selected fields of activity", says Johannes Biermann, President of aicas GmbH.

Digital visit of the European School Karlsruhe at the Technology Park

On April 14th, 2021, we had the pleasure to welcome the geography achievement course of the graduating class of the European School Karlsruhe (ESK) under the guidance of Ms. Oehm in virtual space at our Technology Park.

In the unit Economy of the European Union, the students learn about the functioning and location factors of a science park and chose the Technology Park as an application example here.

The goal after the exchange was to answer the following question: Which hard and soft location factors make up the technology park and how are synergies between research and technology used?

The students' answer can be found in the article "Digital Visit to the Technology Park" published on the ESK website at www.es-karlsruhe.eu.

The ESK, as a long-standing cooperation partner of TPK GmbH, is located in the direct neighborhood and, due to its international orientation, offers its students, among other things, the opportunity to take the European Baccalaureate in French and English.
